DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 7 and 14, drawn to a process for forming a light-scattering layer, classified in class 349, subclass 187.
- II. Claims 1-6 and 11-13, drawn to a light-scattering layer, classified in class 359, subclass 599.
- III. Claims 8-10, drawn to a liquid crystal display device, classified in class 349, subclass 64.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case (2), the light-scattering layer may be formed by successive steps of disposing, patterning, etching, disposing, and polymerizing as need be to comprise the structure.

This relationship are distinct to show that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and

(2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because numerous other light-scattering layers may be used satisfactorily, e.g., a dispersed ground glass layer. The subcombination has separate utility such as a diffuser for an electroluminescent display.

Inventions I and III are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case (2), the light-scattering layer may be formed by successive steps of disposing, patterning, etching, disposing, and polymerizing as need be to comprise the structure.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
